Class RC2a & RC2b	NR	N/A	N/A	May-2045	N/A	0.00%	0.00%	0.00%
Total		£638.2	100.00%					

* Compounded daily Sterling Overnight Index Average rate ("SONIA"). On each quarterly interest payment date, the coupon on the notes is calculated by compounding the daily SONIA rate for the calculation period. On the interest payment date falling in August 2024, the margin payable on Class A1 to D notes will increase. Interest payable on Class B, C, D and Z notes is deferrable with interest accruing on deferred payments at a rate equal to SONIA plus the relevant margin shown in the table above as long as such notes are not the most senior outstanding class of notes.

** Subordination is as a % of the asset pool at closing. Classes S, S VFN, RC1a/b and RC2a/b are not backed by collateral.

*** The reserve funds are as a % of the asset pool at closing. They are amortising subject to compliance with certain triggers and with no floor.

**** Does not include the benefit of excess spread. Class A to Z sums to 100% of the asset pool at closing.

Source: Moody's Investors Service

Summary

This transaction is a static securitisation of buy-to-let (BTL) mortgage loans extended to borrowers in the UK. This is the 31st securitisation that we have rated from Paragon. It is backed exclusively by BTL mortgage loans originated by members of the Paragon Banking Group (Paragon).

A unique feature of this transaction is the use of Sterling Overnight Index Average ("SONIA") as a reference rate for the Note coupons rather than sterling LIBOR, which is more typically referenced in UK RMBS. On each quarterly interest payment date, the coupon on the Notes is calculated by compounding the daily SONIA rate for the calculation period.

As of the cut-off date of 22 June 2019, the securitised portfolio consisted of loans secured by mortgages on residential properties in the UK extended to 3,123 borrowers for BTL purposes. The pool balance is £618.1 million.

Credit strengths

The following factors were the strongest features of this transaction:

» **Asset quality:**

- *No prior adverse credit:* None of the borrowers in the securitised pool has been subject to any personal bankruptcy, individual voluntary arrangements or country court judgements (see "Asset analysis - Comparables").
- *Originator's long origination history:* The originator has provided historical information since 1996 and has an extensive track record of operating in its market segment. Analysis shows that the performance of its securitisations has been better than the average in the UK BTL sector (see "Asset analysis - Comparables").
- *Weighted average (WA) loan-to-value (LTV) ratio:* The pool has a current weighted average LTV ratio of 70.6%, with no loans with WA LTV ratios higher than 90%. About 5.3% of the pool has WA LTV ratios between 80% and 90%, a proportion that compares favourably with that of peer transactions (see "Asset analysis - Comparables").
- *Property valuations:* At origination, a surveyor has performed a full valuation of the property and has included three comparables in the valuation report. Desktop valuations or valuations produced using an automated valuation model are used to check the full valuation provided by the surveyor (see "Asset analysis - Comparables").

» **Structure:**

- *Two amortising reserve funds:* The deal benefits from two amortising reserve funds sized on aggregate at closing at 1.5% of the rated notes. One reserve fund equals 1.5% of Class A and Class B notes' outstanding principal amount and is dedicated solely to provide liquidity to Class A and Class B notes, cover senior expenses and cure any PDL on Class A. The other reserve fund is available for all the rated notes and senior expenses and it is sized as a percentage of Class C and Class D notes' outstanding principal amount. The reserve funds will amortise sequentially except if there has been a required amount trigger (see "Securitisation structure description - Detailed description of the structure - Reserve fund").
- *Protection of yield through swap:* Around 85.6% of the pool consists of fixed-rate loans, which will reset to 3-month GBP Libor plus a margin or the seller's standard variable rate (SVR). The fixed-floating mismatch between these assets and the notes is mitigated by a fixed-floating swap, provided by Lloyds Bank Corporate Markets Plc (A1/P-1 bank deposits; A1(cr)/P-1(cr)) (see "Securitisation structure analysis - Primary structural analysis - Spread compression").

This publication does not announce a credit rating action. For any credit ratings referenced in this publication, please see the ratings tab on the issuer/entity page on www.moody's.com for the most updated credit rating action information and rating history.

Credit challenges

The transaction contains the following challenges:

- » **Risk of margin compression:** The spread could potentially compress in the transaction because of the following reasons:
 - *Unhedged SVR exposure:* This could lead to a decrease in the average yield on the whole pool of loans during the life of the transaction. However, Paragon has the obligation to ensure a minimum WA spread of 3% over SONIA (after taking into account swap payments and any funds standing to the credit of the Mortgage Margin Reserve Fund) is maintained at all times.
 - *Product switches:* The transaction allows for unlimited product switches before the step-up date in August 2024. Upon a product switch, the issuer will, within 30 days, enter into an additional swap agreement to hedge the fixed-floating interest rate exposure in relation to such converted mortgage only if and when the notes become under- or overhedged by more than £10 million. This feature could lead to further spread compression (see "Securitisation structure analysis - Primary structural analysis - Spread compression").
- » **Further advances:** The transaction allows for the purchase of mandatory further advances at any time. In mitigation, such purchases are subject to certain asset and performance conditions. Other loans may also be granted discretionary further advances (see "Asset description - Eligibility criteria - Further advances").
- » **Affordability of mortgage payments:** About 92.4% of loans have been advanced on an interest-only (IO) basis. The risk that IO borrowers could have more stretched finances and the result of the Financial Conduct Authority's (FCA) mortgage market review could limit refinancing opportunities for such borrowers (see "Asset analysis - Comparables").
- » **Servicing disruption risk:** The servicers/administrators are not rated by us. The transaction is therefore exposed to financial disruption risk. This risk is mitigated by the fact that there is a backup servicer/administrator, Homeloan Management Limited (not rated), appointed at closing. Furthermore, the backup servicing facilitator, Maples Fiduciary Services (UK) Limited, undertakes to facilitate the search for a suitable backup servicer/administrator in case either the original servicer or administrator is terminated from its role (see "Securitisation structure analysis - Additional structural analysis - Mitigating servicing disruptions").
- » **Receiver of rent:** Paragon Banking Group uses a receiver of rent as a means of controlling arrears and losses. We believe that should the house prices weaken significantly, it could lead to an increase in loss severities. In a severe recession, a receiver of rent may be unable to successfully re-let a vacant property and so repossession would occur in any case but with a lag and increased loss severity. Additionally, excess spread can leak out of the transaction instead of covering losses and amortising the notes down, as in the case of repossession. Finally, this is an operationally more complex method of resolving payment problems compared with attempting to foreclose sooner, which could be compounded in cases where the servicer itself is under financial pressure (see "Primary asset analysis - Additional asset analysis - Receiver of rent").

Key characteristics

Exhibit 2

Asset characteristics

(Definitive pool, cut-off date of 22 June 2019)

Issuer	Paragon Mortgages (No.26) PLC
Seller:	Paragon Mortgages 2010 Limited ("PML") and Paragon Bank plc ("PB"), wholly owned subsidiaries of Paragon Banking Group ("Paragon") (both not rated)
Originators:	Paragon Mortgages 2010 Limited ("PML") and Paragon Bank Plc ("PB"), wholly owned subsidiaries of Paragon Banking Group ("Paragon") (both not rated)
Servicers and legal title holders:	PML and PB
Receivables:	First-lien (or first and second lien) buy-to-let loans to individuals secured by property located in the UK
Methodology Used:	Moody's Approach to Rating RMBS Using the MILAN Framework, March 2019 (1111693)
Total Amount:	£618.1 million
Number of Borrowers:	3,123
Borrower concentration:	Top 20 borrowers make up 5.8%
WA Remaining Term:	18.3 years
WA Seasoning:	2.9 years
Interest Basis:	6.9% linked to SVR, 7.5% linked to 3m LIBOR and 85.6% fixed rate loans resetting to 3m LIBOR (2.4%) and SVR (97.6%)
WA Current LTV:	70.6%
WA Original LTV:	71.3%
Moody's calculated WA indexed LTV:	67.3%
Borrower credit profile:	Prime borrowers
Delinquency Status:	0.0% in arrears more 90 days

Exhibit 3

Securitisation structure characteristics

Issuer:	Paragon Mortgages (No.26) PLC
Issuer Administrator / Corporate Service Provider:	Maples Fiduciary Services (UK) Limited (NR)
Models Used:	MILAN (UK Settings), ABSROM
Excess Spread at Closing:	1.45% at closing (not stressed)
Back-up Servicer(s):	Each servicer agrees to act for the other servicer in case of servicing interruption. Furthermore Homeloan Management Limited (HML,NR) is the back-up servicer.
Back-up Servicer Facilitator:	Maples Fiduciary Services (UK) Limited (NR)
Cash Manager:	Paragon Mortgages (2010) Limited (NR)
Back-up Cash Manager:	Homeloan Management Limited (NR)
Principal Paying Agent:	Citibank, N.A., London Branch (Aa3/P-1 Bank Deposits; Aa3(cr)/P-1(cr))
Issuer Account Bank:	Citibank, N.A., London Branch (Aa3/P-1 Bank Deposits; Aa3(cr)/P-1(cr))
Collection Account Banks:	Barclays Bank PLC (A2/P-1 Bank Deposits; A2(cr)/P-1(cr)) for Paragon Mortgages (2010) Ltd; and NatWest Bank PLC (A1/P-1 Bank Deposits; Aa3(cr)/P-1(cr)) for Paragon Bank plc
Trustee:	Citicorp Trustee Company Limited (NR)
Arrangers:	Lloyds Bank Corporate Markets plc (A1/P-1 Bank Deposits; A1(cr)/P-1(cr)) and Merrill Lynch International (A2 SUR)
Swap Provider:	Lloyds Bank Corporate Markets Plc (A1/P-1 bank deposits; A1(cr)/P-1(cr))
Credit Enhancements/Reserves:	At closing the two reserve funds will be funded with the proceeds of the Class S notes. The Class A and Class B Liquidity Reserve initially is funded to 1.5% of Classes A and B. The General Reserve is funded to 1.5% of Class C and D notes. Both reserve funds are sequentially amortising.
Form of Liquidity:	The Class A and Class B Liquidity Reserve (solely for Class A and Class B notes interest; senior fees, excluding PDL); the General Reserve (for Class A to D notes, and senior fees, excluding PDL); principal to pay interest (only for A and B notes).
Number of Interest Payments Covered by Liquidity:	The cash reserves amount provide around 6 months of liquidity assuming a SONIA rate of 5.7%
Interest Payments:	Quarterly in arrears on each payment date
Principal Payments:	Pass-through on each payment date
Payment Dates:	15th of February, May, August and November
First Payment Date:	15th November 2019
Hedging Arrangements:	There is fixed-floating swap hedging for the fixed portion of the pool. The fixed/floating hedge will adjust to hedge the current fixed rate portion of the portfolio, with a tolerance margin of £10million above/below such balance to retain conversion loans (not as a general limit). SVR loans are not hedged

Asset description

The assets backing the notes are first-ranking prime BTL mortgage loans originated by the sellers under the trading name of Paragon Banking Group. All the loans in the pool are secured on residential properties in the UK; Exhibits 4-7 detail additional high-level information regarding the assets in the pool.

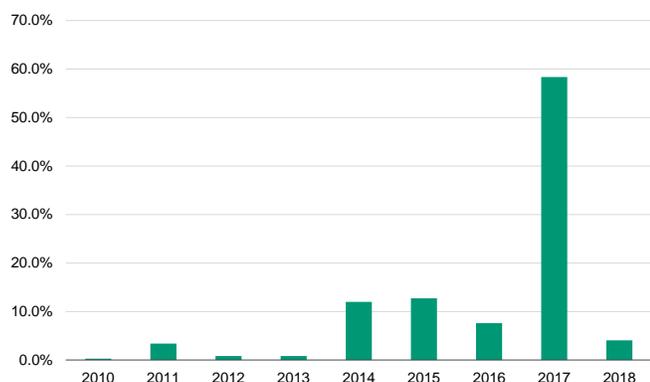

Asset description as of the portfolio cut-off date

The definitive pool cut-off date is 22 June 2019.

Pool characteristics

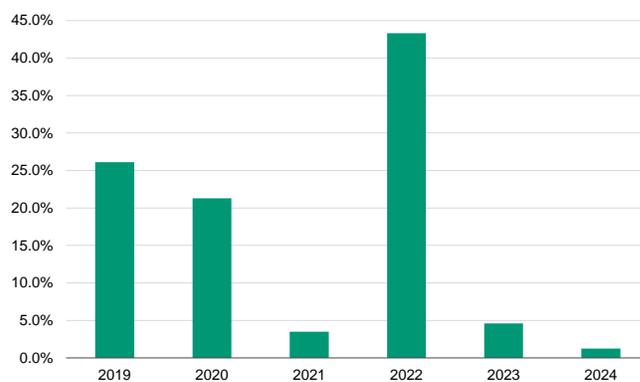

Exhibit 4 illustrates that about half of the loans in the pool (62.4%) were originated in 2017 and 2018, and 37.6% were originated before 2017. Exhibit 5 highlights the time when the fixed-rate portion of the portfolio will reset, with 40.5% of the fixed-rate mortgage loans in the pool switching to floating rate in 2019 and 2020. The entire fixed portion of the pool will reset to a floating rate in 1.9 years on average.

Exhibit 4
Portfolio breakdown by date of origination

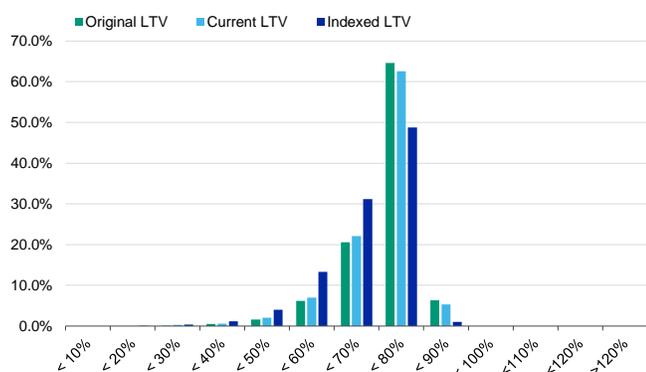

Sources: MILAN file by Paragon Banking Group, Moody's Investors Service computations

Exhibit 5
Fixed-rate portfolio breakdown by year of reset

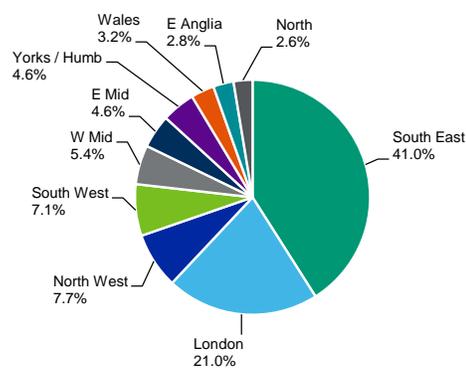

Sources: MILAN file by Paragon Banking Group, Moody's Investors Service computations

Exhibit 6
Portfolio breakdown by current/indexed LTV ratio

Sources: MILAN file by Paragon Banking Group, computations by Moody's Investors Service

Exhibit 7
Portfolio breakdown by geography

Sources: MILAN file by Paragon Banking Group, Moody's Investors Service computations

The WA LTV ratio of the pool is 70.6%, and Exhibit 6 shows that more than half of the pool has a current LTV ratio of 70%-80%. Around 41.0% of the loans are concentrated in the South East region, as Exhibit 7 shows, and 21.0% of the pool is concentrated in the London region. As is fairly common for this type of portfolios, there are some material borrower concentrations because the borrowers tend to have multiple properties. In this portfolio, the top 20 borrowers represent 5.8% of the pool.

Originator/servicer

The sellers, Paragon Bank Plc and Paragon Banking Group (2010) Ltd (PML), are part of the Paragon Banking Group (neither seller is rated). PML is an origination vehicle, established in 2010, while Paragon Bank Plc is a bank licensed to take deposits and provide finance including regulated consumer credit. Paragon Bank Plc is authorised and regulated by the Prudential Regulation Authority (PRA) and the FCA, and is the parent company of Paragon Mortgage (2010) Ltd.

All the loans securitised were originated under the Paragon brand. Paragon Banking Group provides mostly BTL loans to professional landlords, who are borrowers with portfolios of properties. Therefore, there is above-average borrower concentration in the pool.

The sellers are also the servicers and cash administrators of the transaction, with PML taking the primary lead as the Administrator. They have agreed to take on each other's role in case of servicing disruption by the other party.

Further information regarding the servicer and originator, including our originator and servicer reviews, can be found in Appendix 3.

This is Paragon Group's 31st securitisation transaction to include BTL loans.

Eligibility criteria

The sellers provide the seller asset warranties, which, if not met, mean that the loans need to be repurchased. All loans upon entry in the portfolio must meet the following asset acquisition guidelines (*inter alia*):

- » Each loan constitutes a valid and binding obligation of the borrower if:
 - it is a first legal charge over the property;
 - both the first and second legal charges are in the same portfolio;
- » Properties are either residential or mixed residential/commercial use;
- » All steps to perfect legal title have been taken or are being taken, with no delay after origination;
- » Before granting initial loans or further advances, the sellers' lending guidelines were adhered to;
- » Each loan has a term ending no later than 30 April 2043;
- » The property securing the mortgage(s) is in England or Wales;
- » No borrower is an employee or director of Paragon;
- » At least one monthly installment due in respect of each loan has been paid by the relevant borrower;
- » Each loan was, at the time of origination and continues to be denominated, in sterling;
- » Before making an initial mortgage loan, a valuation is made either by a valuation by the seller's valuer or a valuer appointed on the seller's behalf. Further advances may be made using indexed valuations.

Loan amendments (product switches)

Amendments of loans in the pool are possible only in relation to interest rate conversions (to change the basis upon which the interest rate is charged) and repayment terms (to change from IO or part to repayment only).

Interest rate conversions are subject to the following conditions:

- » No unremedied event of default has occurred at the time of the proposed conversion;
- » There are no other material changes to the terms of the mortgage documentation;
- » Where the loan is to be converted to a fixed-rate loan, the administrator will within 30 days enter into a fixed-floating hedge and the WA swap rate does not exceed 4.0%;
- » The hedging corridor of under/over-hedging (£10,000,000) has been met;

- » The borrower under such loan is not more than a month in arrears;
- » The conversion takes place on or before the step-up date;
- » The conversion margin reserve fund has sufficient funds to ensure that the issuers' available revenue receipts are not reduced by the conversion;
- » No administrator termination event has taken place.

PML, as the administrator, may also on each interest payment date debit the revenue ledger and credit a discretionary reserve fund (the "Conversion MRF Discretionary Fund") in accordance with the Revenue Priority of Payments to fund the amounts required for future conversions. Such amounts can be used, *inter alia*, to ensure that the effect of the conversion is that the issuer does not receive less revenue receipts in respect of such interest rate conversions.

Repayment conversions are permitted too, subject to a cap of 10% of the mortgage portfolio.

Further advances

Certain loans in the pool have mandatory further advances, for example, loans where the properties are undergoing repair or renovation. Other loans may be granted discretionary further advances. Mandatory further advances are granted at any time and funded first from the MFA Pre-Funding Reserve Ledger and then from the issuer's own principal receipts.

The MFA Pre-Funding Reserve Ledger has been funded at closing in an amount equal to 0.06% of the initial principal amount of the notes. The servicer will debit the necessary amounts from the MFA Pre-Funding Reserve Ledger on the relevant date and will credit such amounts to the principal ledger to fund any mandatory further advances.

Discretionary further advances can only be granted subject to certain conditions:

- » There is a Principal Deficiency Ledger ("PDL") balance equal to zero;
- » The General Reserve Fund is at least equal to the General Reserve Fund required amount on the following Interest Payment Date ("IPD");
- » Any such further advance may only be made if it is secured on the relevant property;
- » The outstanding balance of three months' arrears is lower than 2.0%;
- » The WA current LTV does not exceed 75.0%;
- » The outstanding balance of the top 20 borrowers does not exceed £40,000,000.

Asset analysis

Primary asset analysis

The first step in the analysis of the credit quality of the pool is to determine a loss distribution of the mortgages to be securitised. To determine the shape of the curve, two parameters are needed: the expected loss and the volatility around this expected loss. These parameters are derived from two important sources: historical loss data and the MILAN loan-by-loan model.

Expected loss

We use performance data provided by the originator in addition to other relevant data to extrapolate expected losses for the loan pool. Examples of data include market- and sector-wide performance data, the performance of other securitisations and other originators' data.

The expected loss of 1.25%, which is among the lowest in the UK BTL sector, is driven by (1) the seller's extensive experience in the BTL spectrum, (2) the performance of the seller's precedent transactions as well as the historical performance of the seller's loan book, (3) the fact that around 92.4% of the pool are IO loans, and (4) benchmarking with other UK BTL transactions.

MILAN model

To obtain the volatility under stressed scenarios, we take into account historical data. However, historical volatility may not be significant (given insufficient data points or incomplete data), and in addition, may not be representative of the future because it is based on the previous economic environments experienced.

Consequently, we determine a number representing the enhancement that would be required for a pool of mortgages to obtain a rating consistent with the local country ceiling for United Kingdom (Aaa) under highly stressed conditions. The MILAN CE is produced by using a loan-by-loan model, which looks at each loan in the pool individually, and based on its individual characteristics such as the LTV ratio or other identified risk drivers, will produce a benchmark CE number. This assumes stressed recovery rates (through house price decline), time to recovery, interest rates and costs to foreclosure. The WA benchmark CE number will then be adjusted according to positive and negative characteristics of each loan or of the pool as a whole to produce the MILAN CE number.

The MILAN CE for this pool is 11.5%, which is among the lowest in the UK BTL sector and it is driven by (1) the historical performance of the pool (99.9% of the pool has never been in arrears), (2) the current WA LTV ratio of 70.6%, (3) the fact that around 92.4% of the pool are IO loans, (4) the potential changes to the initial pool because of product switches, (5) the possibility for the borrowers to request further advances, and (6) benchmarking with other UK BTL transactions.

Lognormal distribution

The MILAN CE number and the expected loss number are based on Rating Committee discussions and are used to derive the lognormal distribution of the pool losses. Because of the large number of loans and supporting historical data, we use a continuous distribution to approximate the loss distribution.

The standard deviation of the distribution is found by setting the expected loss of the area of the lognormal distribution beyond the MILAN CE equal to the expected loss that is consistent with the idealised expected loss of a Aaa tranche.

Risk of yield compression

The pool currently comprises a mix of fixed-rate loans (85.6%), loans tied to 3-month GBP Libor (7.5%) and loans tied to Paragon's SVR (6.9%). All fixed-rate loans roll off onto either Paragon's SVR rate (97.6%) or onto 3-month GBP Libor (2.4%) plus a margin within two to five years after origination.

The fixed-floating risk between the fixed-rate loans and the SONIA due under the notes is hedged via a fixed notional interest rate swap with Lloyds Bank Corporate Markets Plc (A1/P-1 bank deposits; A1(cr)/P-1(cr)). Under the swap agreement:

- » The issuer will pay a swap rate;
- » The swap counterparty will pay SONIA on the same notional balance.

The swap has a fixed notional that amortises over time based on an assumption of 0% Constant Prepayment Rate ("CPR"). If the notional of the fixed-rate loans in the pool differs from that of the swap, the issuer will be overhedged. We have tested different amortisation profiles of the portfolio to analyse the potential impact of overhedging in case of CPR above 0%.

Upon a product switch, the issuer will, within 30 days, enter into an additional swap agreement to hedge the fixed-floating interest rate exposure in relation to such converted mortgage only if and when the notes become under- or overhedged by more than £10 million. We have accounted for a potential underhedged exposure through a reduction in the yield by assuming £10 million of the pool will remain unhedged in a scenario where SONIA increases up to 12% in 25-basis-point quarterly increments.

The transaction is unhedged with respect to SVR-linked mortgages as Paragon's SVR is not explicitly tied to SONIA. As in previous Paragon transactions, the transaction benefits from an obligation for Paragon to maintain a minimum spread over the index rate paid on the notes. Under this obligation, the servicer will have to set the rate on the variable-rate mortgages in the pool so as to ensure a minimum WA spread of 3% over SONIA (after taking into account swap payments, any funds standing to the credit of the Mortgage Margin Reserve Fund and the scheduled release from the Conversion Margin Reserve Fund) is maintained at all times. The Mortgage Margin Reserve Fund, if any, will be funded at closing. The Discretionary Mortgage Margin Reserve Fund will be funded on the Closing Date, and will be used to fund the Mortgage Margin Reserve Fund. On each principal determination date, the servicer will calculate the

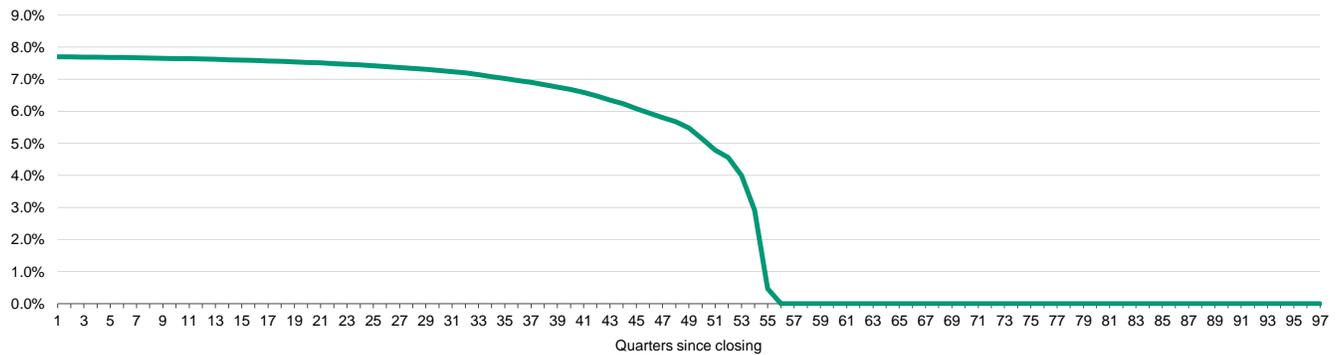

Additional MRF Requirement Amount (if any) and may (at its discretion) fund these amounts through the Revenue Priority of Payments subordinated loan on each interest payment date.

Given the proportion of SVR loans post-reversion in the pool will be 90.4%, we believe that Paragon will have the ability to comply with this minimum spread mechanism and have given partial benefit to the servicer's commitment.

Exhibit 8 shows the yield vector used by us in the analysis of the transaction after taking into account Paragon's minimum spread commitment, which has been stressed to account for the potential for the notes to be underhedged because of the £10 million hedging corridor.

Exhibit 8

Scheduled yield vector used by Moody's assuming a 5.7% SONIA rate

Sector outlook

We have a negative collateral performance outlook for the UK BTL RMBS sector. However, the UK's low interest rates should continue to support RMBS performance.

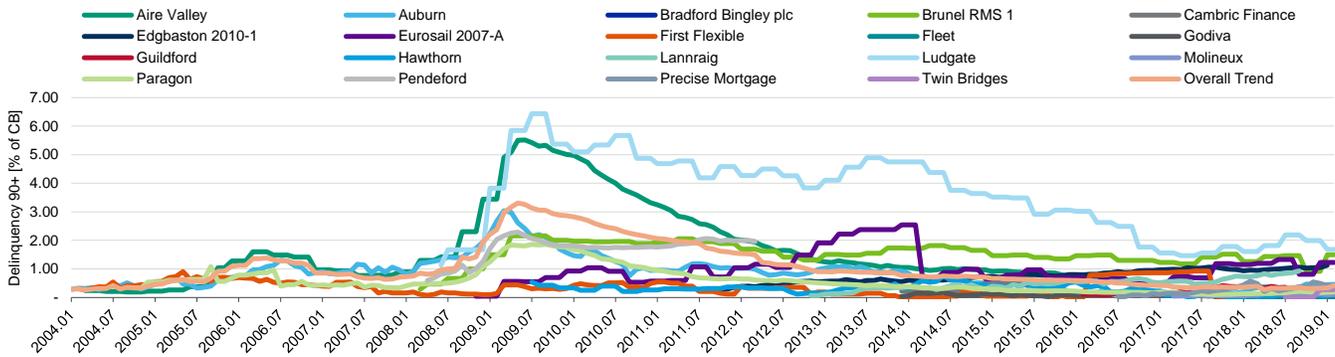

The drivers of the expected UK BTL collateral performance are (1) rental income, which will grow more slowly or even decline in some regions, and (2) the pressure on tenants' disposable income. BTL transactions with large exposures to recent vintage mortgages will be most affected.

We expect UK real GDP growth to slow to 1.2% in 2019 from 1.4% in 2018, before recovering to 1.4% in 2020. Brexit will continue to weigh on the nation's economic growth prospects, with significant downside risks to the domestic economy if the UK and the European Union do not reach an amicable deal.

Please see Exhibits 10-13 to understand how comparable deals in the sector have performed.

Additional asset analysis

Data quantity and content

In our view, the quantity and quality of data received is similar compared with those in transactions that have achieved high-investment-grade ratings in this sector. An AUP has been performed by Deloitte LLP. The AUP results were in line with our expectations and did not highlight any particular concerns regarding the quality of the data.

Origination quality

We believe that Paragon Banking Group has adequate controls and procedures in place to generate high-quality loans, and according to our originator review, the overall origination ability and stability of Paragon has been classified as average. For more information, see Appendix 3, which contains the originator review.

Servicing quality

We have reviewed Paragon's procedures and practices, and found Paragon acceptable in the role of servicer. According to our servicer review, the overall servicing ability and stability has been classified as average. For more information, see Appendix 3, which contains the servicer review.

Receiver of rent

The sellers/administrators use a receiver of rent as a means of controlling arrears and losses for third-party loans that they service and it could be used on the loans in this transaction.

Because of the low level of arrears in the favourable interest rate environment, this has yielded positive results to date, with precise performance metrics comparing favourably with the sector average.

We believe that should the house prices weaken significantly, it could lead to an increase in loss severities. In a severe recession, a receiver of rent may be unable to successfully re-let a vacant property and so repossession would occur in any case but with a lag and an increased loss severity. Additionally, excess spread can leak out of the transaction instead of covering losses and amortising the notes down, as in the case of repossession. Finally, this is an operationally more complex method of resolving payment problems compared with attempting to foreclose sooner, which could be compounded in cases where the servicer itself is under financial pressure.

Set-off

Some of the borrowers have an account with Paragon Bank Plc (PB); however, only a few have an account balance above £85,000, which is the limit above which the UK deposit scheme does not reimburse the account holder in case the deposits are lost because of, for example, insolvency of Paragon Bank. Loans to Paragon Bank Plc borrowers who have deposits in excess of £85,000 may not be added to the portfolio on the Closing Date.

Deposit set-off risk has, therefore, not been modelled in this transaction.

Securitisation structure description

The originators and sellers, Paragon Mortgages 2010 Limited (PML) and Paragon Bank Plc (PB), will sell portfolios of residential BTL mortgage loans to the issuer, Paragon Mortgages (No.26) PLC.

At closing, the issuer will issue the notes and certificates to finance the purchase of the asset pool. Each seller will service the assets it has sold to the issuer, although PML will take the lead in servicing with respect to any dealings with the issuer.

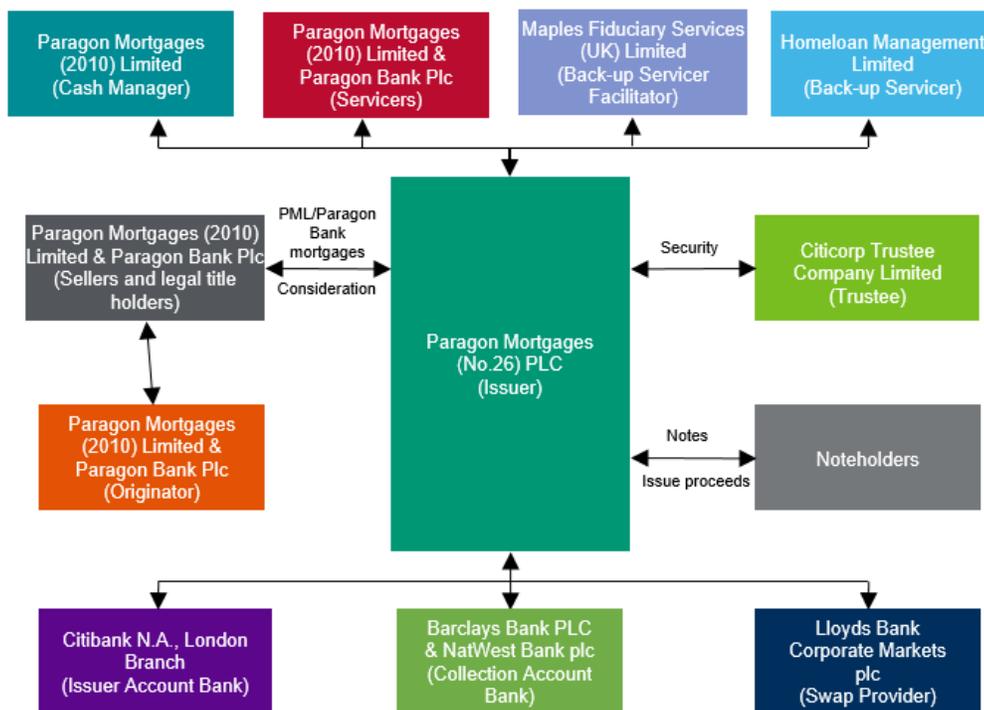

The Class S notes and Class S variable funding notes (VFN) are issued to finance certain start-up costs of the issuer, as well as to fund the initial reserves and any future discretionary reserves. PML will be granted RC1a and RC2a residual certificates and PB will be granted RC1b and RC2b residual certificates.

This entitles them to receive deferred consideration on the loans sold to the issuer. Exhibit 14 illustrates all the parties and their respective roles.

Structural diagram

Exhibit 14

Paragon Mortgages 26 PLC transaction structure

Source: Paragon Mortgages (No.26) PLC prospectus

Detailed description of the structure

Credit enhancement

The Class A notes benefit from the subordination provided by more junior notes, namely Class B-Z notes. The S notes and S VFN are used (among other things) to fund the issuers' various reserves, while the RC1 and RC2 notes are used to record the entitlement to excess spread.

At closing, the aggregate reserve funds will be sized to 1.5% of the initial principal balance of the rated notes. An amount corresponding to 1.5% of the Class A and Class B notes outstanding will form the Class A and Class B Liquidity Reserve Fund, which will cover interest shortfalls on Class A and Class B notes and senior expenses. A further 1.5% of the Class C and D notes will form the General Reserve Fund, which is available to cover senior expenses as well as A, B, C and D note shortfalls. Both reserve funds amortise, and

amounts not needed after amortisation will be added to the issuer's available revenue funds, which can cover all items of the revenue waterfall, including the PDL for all notes. The transaction has annualised stressed excess spread at closing of around 0.41% (after swap payments).

The reserve funds will not amortise in certain circumstances, for example, if they are funded below their target level at the previous interest payment date, when the cumulative amounts debited to the PDL exceed 1.0% of Classes A to Z or the balance of loans more than three months in arrears exceeds 3.0%.

Flow of funds

Allocation of payments/pre-accelerated revenue waterfall: On each quarterly payment date, the issuer's available funds (that is, interest amounts received from the portfolio, the reserve funds, funds received under the swap agreement, interest earned on the issuer's account and eligible investments, principal addition amounts and amounts released from the conversion, and margin reserves) will be applied in the following simplified order of priority and only to the extent that the payments of higher priority have been made in full:

1. Senior fees and expenses to various parties;
2. Payments to the swap providers (other than subordinated amounts);
3. Interest on the Class A notes;
4. Eliminating any debit balance on the PDL that exceeds the aggregate current principal outstanding of the Class B notes, the Class C notes, the Class D notes and the Class Z notes;
5. Interest on the Class B notes;
6. Amounts required to replenish the Class A and Class B Liquidity Reserve Fund up to its target size;
7. Eliminating any debit balance on the PDL that exceeds the aggregate current principal outstanding of the Class C notes, the Class D notes and the Class Z notes;
8. Interest on the Class C notes;
9. Eliminating any debit balance on the PDL that exceeds the aggregate current principal outstanding of the Class D notes and the Class Z notes;
10. Interest on the Class D notes;
11. Eliminating any debit balance on the PDL that exceeds the current principal outstanding of the Class Z notes;
12. Issuer profit amount (£250 a quarter);
13. Amounts required to replenish the General Reserve Fund up to its target size;
14. Eliminating any remaining debit balance on the PDL;
15. On any interest payment date occurring before the step-up date, towards funding the mortgage margin reserve fund and the conversion margin reserve fund in connection with interest rate converted mortgages expected during the next collection period or any increase to the mortgage margin reserve fund (if any);
16. Other costs, payments or fees because of third parties;
17. Hedge subordinated amounts;
18. On any interest payment date occurring on or after the step-up date or the final redemption date, to apply all amounts as available principal receipts;
19. Interest due on the Class Z notes;

20. Interest due on the Class S notes;
21. Principal due on the S notes (subject to the principal payment not reducing the balance of the S note below the required level of the respective reserve fund);
22. First interest and then principal due on the S VFN;
23. Purchase of additional hedging arrangements;
24. Junior fees and expenses;
25. On any interest payment date before (but excluding) the step-up date, all excess amounts to be paid to the RC1 certificate holders and thereafter, to the RC2 certificate holders.

Interest on Classes B, C, D and Z notes is deferrable as long as they are not, at that point in time, the most senior outstanding class of notes. Interest is not deferrable on Class A or the most senior class of notes.

Allocation of payments/pre-accelerated principal waterfall: On each quarterly payment date, the available principal receipts, which include principal amounts received from the portfolio, amounts applied to clear the PDL, but which are reduced by principal addition amounts (principal receipts to pay Class A and in certain circumstances Class B interest), will be applied in the following order of priority and only to the extent that the payments of higher priority have been made in full:

1. Towards mandatory further advances to the extent that the issuer has insufficient reserves to cover such amounts;
2. Towards discretionary further advances;
3. Refunding incorrect direct debit payments taken (if any);
4. To amortise the notes sequentially in order of seniority;
5. All remaining amounts to be applied as available revenue receipts.

Allocation of payments/PDL-like mechanism

A PDL is recorded for realised losses on the portfolio and when there has been application of principal receipts to meet any items in the interest waterfall.

Realised losses are defined as any losses arising in relation to a loan in the portfolio, which causes a shortfall in the amount available to pay principal on the notes, but may be reduced if subsequent recoveries are received by the issuer on those loans. Losses arising because of borrowers applying set-off have not been included in the definition of realised loss.

Reserve fund

At closing, the Class A and B Liquidity Reserve Fund will be funded with the proceeds of the Class S notes for an amount corresponding to 1.5% of the aggregate Class A and B notes issuance size. The General Reserve Fund is funded via the same means at 1.5% of the sum of the Class C and D notes issuance sizes.

The reserve funds amortise to maintain 1.5% of the respective principal outstanding of the relevant notes. The reserve funds stop amortising if the balance of mortgages more than three months in arrears exceeds 3.0% of the securitised mortgage pool or if the cumulative amount debited to the PDL since closing exceeds 1.0% of the initial notes balance (A to Z).

Liquidity

Liquidity is provided as follows: in the event of a shortfall in available revenue funds to pay senior expenses, Class A and Class B interest, the Class A and B Liquidity Reserve Fund is used.

If the issuer still has a shortfall in revenue receipts to pay rated note interest or senior expenses, or both, then the General Reserve Fund may be used.

Finally, principal is available to pay senior expenses, Class A and Class B note interest once the above two reserves have been exhausted (subject to no more than 50% Class B PDL when it comes to Class B interest being paid). Such diversions of principal result in a debit to the PDL.

Asset transfer

The residential mortgage loans in the pool have been transferred to the issuer through an equitable assignment. Notification of redirection of payments to the issuer's account occurs upon perfection of legal title, which would take place, for example, in case of insolvency of the seller/servicer or an enforcement notice being served on the issuer.

Cash manager

The cash manager in the transaction is PML. Its main responsibilities are the determination of cash flow amounts, maintenance of ledgers and preparation of investor report. The main responsibilities of the backup servicer facilitator, Maples Fiduciary Services (UK) Limited, are to use its best efforts to appoint a backup servicer in case PML or PB cannot perform their servicing duties any longer.

Enforcement of representations and warranties (R&W)

Loan repurchase following breach of R&W: if material breaches of R&W have not been remedied within 28 days of the issuer notifying such breaches, the relevant seller shall repurchase the loan from the issuer.

Securitisation structure analysis

Our ratings are based on the quality of the asset pool, the levels of credit enhancement, the liquidity provided by the reserve funds, and the structural and legal integrity of the transaction. The ratings on the notes address the likelihood of receipt by noteholders of timely payment of interest and ultimate payment of principal at par on or before the rated final legal maturity date for all rated notes. Our ratings address only the credit risks associated with the transaction.

Primary structural analysis

We consider the probability of default under the notes, as well as the estimated severity of loss, when assigning a rating.

Tranching of the notes

Once the loss distribution of the pool under consideration has been computed, a cash flow model is used to assess the impact of the structural features of the transaction. It calculates the average lives and the losses experienced by the notes for every loss scenario for the portfolio. Based on these numbers, the expected loss and the WA life of the notes are calculated as WAs based on the probabilities of the respective scenarios. The expected loss on each tranche, together with the notes' WA life, determines the rating, which is consistent with our target losses for each rating category.

Spread compression

In our cash flow modelling, we took into account the decline in the average spread on the pool over time, described under "Asset analysis - Primary asset analysis – Risk of yield compression" above.

The transaction benefits from a fixed-floating swap provided by Lloyds Bank Corporate Markets Plc (A1/P-1 bank deposits; A1(cr)/P-1(cr)), whose notional covers the fixed portion of the pool until the fixed-rate loans switch to their reversionary floating rate or SVR. Under the swap agreement, the issuer will pay a swap rate and will receive SONIA as is owed to the notes. Upon a product switch, the issuer will, within 30 days, enter into an additional swap agreement to hedge the fixed-floating interest rate exposure in relation to such converted mortgages only if and when the notes become under or overhedged by more than £10 million.

The collateral trigger for the fixed-rate swap has been set at loss of A3(cr) and the replacement trigger at loss of Baa1(cr). The transfer trigger level is lower than that of a typical UK standalone RMBS transaction; however, given the current rating of the swap counterparty, the level of the trigger does not have a negative impact on the ratings of the notes.

The swap documents are substantially consistent with our methodology to assess counterparty exposure (see [Moody's Approach to Assessing Counterparty Risks in Structured Finance](#), published in January 2019).

Subordinated swap amounts: Should the swap be terminated with the swap counterparty as either the sole affected party or the defaulting party, the swap termination payment is subordinated in the waterfall. However, the payment ranks ahead of clearing the Class Z PDL. Therefore, should such a swap termination payment be due at the same time that there are losses in the loan portfolio, excess spread would go to the swap counterparty first as opposed to benefiting the noteholders by provisioning for such losses through the PDL.

Assumptions and definitions

We use the following main assumptions and definitions in our cash flow modelling:

» Assumptions:

- Stressed fees are 0.30% per annum subject to a floor of £50,000;
- The constant prepayment rate modelled is 15.0%;
- There is no interest modelled on cash in the issuer's accounts;
- The step-up date is in August 2024.

» Definitions:

- The PDL records any losses on the assets and the application of any principal to meet any income deficit;

- Default definition is not applicable given that the PDL records losses.

Comparables

Additional structural analysis

Cash commingling

All the payments under the loans in this pool are paid into a collection account in the name of each seller, either at NatWest Bank plc (A1/P-1 bank deposits; Aa3(cr)/P-1(cr)) or Barclays Bank PLC (A2/P-1 bank deposits; A2(cr)/P-1(cr)). The following mitigants to commingling risk and collection account bank default risk are included in the structure:

- » *Daily transfer of payments to the issuer account held by Citibank, N.A., London Branch (Aa3/(P)P-1 bank deposits; Aa3(cr)/P-1(cr));*
- » *Collection account declaration of trust:* The seller has declared a trust (among the issuer, the seller and the collection account banks) over the collection accounts in favour of the issuer;
- » *Transfer trigger for the collection account:* Should either of the collection accounts be downgraded below Baa3, they need to be replaced.

Given the aforementioned mitigants, commingling risk has not been modelled.

Mitigating servicing disruptions

Homeloan Management Limited has been appointed as back-up servicer and cash manager, via the back-up administration agreement. It has agreed to a relatively tight window of five days in which it will step in to assume either or both of the duties in case the sellers are unable to perform such duties.

Furthermore, Maples Fiduciary Services (UK) Limited has been appointed as back-up servicer facilitator, a positive feature. In case HML and the sellers/administrators are unable to perform their duties, it will use its best efforts to appoint a replacement servicer.

In the event the servicer report is not delivered in time, the servicer shall base the payments on estimates using the last three verified servicing reports, and once it receives the servicer report, it will reconcile the estimates with the actual figures and if needed make additional payments.

Also, the swap payment can be based on estimates in absence of the servicer report. It should be noted that revenue receipts can leak out of the transaction during a servicer interruption. However, any reconciling amounts because of a swap counterparty

following estimation as a result of operational risk will only be paid to the extent cash is available and such a shortfall will not cause a termination of the swap.

Liquidity of around 6 months of interest payments and senior expenses on the rated notes is provided by the two reserve funds assuming current SONIA and current hedging in place, including the swap costs.

Methodology and monitoring

Overview

The principal methodology used in this rating was [Moody's Approach to Rating RMBS Using the MILAN Framework](#), published in June 2019.

We will monitor the transaction on an ongoing basis to ensure that it continues to perform in the manner expected, including checking all supporting ratings and reviewing periodic servicing reports. Any subsequent changes in the rating will be publicly announced and disseminated through Moody's Client Service Desk.

Significant influences: In addition to the counterparty issues noted, further deterioration in the housing market beyond that modelled may have an impact on the subject transaction's ratings.

Factors that could lead to an upgrade

- » Better performance of the underlying collateral than initially expected;
- » Deleveraging of the capital structure.

Factors that could lead to a downgrade

- » Material reduction in creditworthiness of the seller/servicer or of the other transaction counterparties;
- » Significant deterioration in the UK economy and real estate market;
- » Unforeseen legal or regulatory changes.

Monitoring triggers

*Interest rate swap triggers:*¹

- » Remedy for loss of A3(cr) is to post collateral;
- » Remedy for loss of Baa1(cr) is to replace the swap counterparty or obtain a guarantee from a guarantor.

*For issuer account bank triggers:*²

- » Loss of A3 (senior unsecured rating), remedy is to replace or find a guarantor;
- » Eligible investments must be rated at least A2 and P-1 or A3 (up to one month investments).

For collection account bank triggers:

- » Loss of Baa3 (senior unsecured rating), remedy is to replace or find a guarantor.

Monitoring report

Data quality

- » The investor report format is being finalised;
- » The report will be in line with previous Paragon deals and so in line with other transactions in the sector;
- » There is an undertaking to provide us with an updated pool cut once a quarter;
- » Loan modifications for arrears management are not reported separately;
- » Further advances are reported in the investor reports.

Data availability

- » The report is provided by Paragon Mortgages (2010) Limited;
- » The timeline for the investor report is provided in the transaction documentation and the priority of payment section is published on the interest payment date;
- » The investor report is likely to be completed no later than 30 days following the end of the relevant collection period;
- » The frequency of the publication of the investor report is quarterly and the frequency of the interest payment date is quarterly;
- » Investor reports are publicly available on a website.

The analysis that we undertook at the initial assignment of a rating for an RMBS may focus on aspects that become less relevant or typically remain unchanged during the surveillance stage. Please see [Moody's Approach to Rating RMBS Using the MILAN Framework](#) for further information on our analysis at the time of the initial rating assignment and the ongoing surveillance in RMBS.

Appendix 1: Summary of the originator's underwriting policies and procedures

Exhibit 16

Originator Ability	At closing
Sales and Marketing Practices	
Origination channels:	95% brokers, 5% direct customer enquiries
Role of the intermediaries/brokers:	The intermediary acts as the applicants adviser and submits application information only. Validation is carried out by Paragon.
Frequency of intermediaries/brokers monitoring:	Brokers are subject to initial due diligence and monitoring of performance is ongoing.
Compensation/ incentive structure of sales team (brokers/intermediaries and branches):	Intermediaries are paid a procurement fee for introducing an application typically between 0.5% and 0.75% of the loan on completion. Paragon regional managers are compensated with a mix of basic salary and bonus. The bonus will typically equate to 20 - 25% of basic salary.
Separation and independence of sales and approval function:	Sales and underwriting operate independently and report through separate directors. Sales have no underwriting mandate.
Underwriting Policies and Procedures	
% of loans automatically underwritten (i.e. without manual approval):	0% - All loans are written based upon manual approval. The system based underwriting system is designed to filter applications and assist the underwriter, not replace them.
% of loans manually underwritten:	100%
Back-testing of automatic underwriting/internal score (if applicable):	Both manual and credit score assisted processes are reviewed on an ongoing basis and credit reports produced monthly to the Group Credit Committee.
Average experience in underwriting or tenure with company:	44% 0-5 years , 12% 5-10 and 44% with 10+ years' experience
Ratio of loans underwritten per FTE1 per day:	Within a range 2 - 4 (depending on complexity)/day
Criteria for compensation of underwriters:	Underwriters are compensated on basic salary only (no performance related bonus) and also participate in a Group wider profit related pay scheme which pays an annual sum based on a distribution of 1% of the Group's gross profit. The average over the last 5 years per employee was £1.4k
Approval rate:	The approval rate is circa 55%
Mandate/lending authority for first level underwriter/personnel:	£100k 75%LTV - is the lowest level mandate authority.
Percentage of exceptions to underwriting policies:	There are de minimis (<0.2%) exceptions to underwriting policy
Process and tools for the borrower identity check:	The solicitor acting for Paragon is required to complete identity checks in line with UK anti-money laundering regulation. In addition - data supplied by the credit reference agencies is used to check for M/L compliance.
Fraud prevention tools and % of applicants checked for fraud:	100% All cases are checked against Sira & Cifas databases.
Source of credit history checks:	Equifax and Credit safe are used as suppliers of consumer and commercial credit data within the underwriting process. All personal applicants and all corporate applicants are searched using these systems.
Credit history requirements:	No material adverse credit
Use of external credit bureau scores:	Personal Applicant -Equifax - Risk Navigator score - 320. Corporate applicants - Credit Safe - 30
Use of internal credit scores:	None
Methods used to assess borrowers' repayment capabilities:	All mortgages are BTL. A minimum interest coverage ratio is used to assess affordability. For non portfolio borrowers the ICR is determined by the tax band applicable to the applicants income. For basic tax payer = 125%, higher rate tax payer = 140%. For portfolio borrowers the ICR is determined using a combination of the tax band and the property type. Single self contained properties range from 125% - 140% and HMO's multi-unit blocks from 130% - 145%
Income taken into account in affordability calculations:	There is a minimum of £25k requirement in all cases
Other borrower's exposures (i.e. other debts) taken into account in affordability calculations:	Information on other debts and liabilities is collected and recorded and may be taken into account but the affordability assessment is driven by the property information.
Is interest rate stressed to calculate affordability?	The interest rate is stressed as follows: Current Affordability (ICR reference rate) <ul style="list-style-type: none"> - Non 5 year fixed product uses charging + 2% or 5.5%, whichever is greater - 5 year fixed currently uses 4% or product charging rate, whichever is greater <p>Future Affordability</p> <ul style="list-style-type: none"> - Non-5 year fixed products uses reversion rate + predicated change in bank base rate - 5 year fixed products uses reversion rate + 0.5% (outside of regulation)

Exhibit 17

Originator Ability	At closing
Underwriting Policies and Procedures	
Is amortisation modified to calculate affordability for I/O/balloon loans?	No
Method used for income verification	Rental income is assessed by the Group's surveyors or by a group appointed panel valuer, the valuation which is validated by a Paragon group surveyor
Criteria for non-income verified and %:	Not applicable
Maximum age at maturity & assessment of income for pensioners:	Not applicable
Maximum loan size:	£25m (in aggregate)
Valuation types used for purchase & LTV limits:	Full physical inspection 80%
Valuation types used for remortgage & LTV limits:	Full physical inspection 80%
Valuation types used for further advances & LTV limits:	Full physical inspection 80%
Valuation types & procedure for construction loans & LTV limits:	Not applicable
Valuation types & procedure for new built properties & LTV limits:	Full physical inspection 80%
LTV limit for first-time-buyers/Buy-to-let/other (please specify and delete non relevant criteria):	Maximum LTV:80% up to £500k, 70% up to £1 million and 65% up to £2 million
Collateral Valuation Policies and Procedures	
Value in the LTV calculation for underwriting purpose:	Lower of the purchase price or valuation
Value in the LTV recorded in database system if different than above	Lower of the purchase price and valuation (separately the purchase price)
Type, qualification and appointment of valuers:	Internal Surveyors Team (all RICS qualified 10 yrs post qualified experience). Where necessary we will instruct a panel surveyor (all RICS qualified) but these will be subject to a 100% audit by the internal surveyors function.
Monitoring of quality of valuers:	All valuations subject to a regular random audit conducted by senior audit surveyor.
Closing Policies and Procedures	
Quality check before releasing funds:	Letter/phone calls to confirm borrower information, validation that insurance is in place, check with notary, etc.
Entity responsible for the deed registration & time needed:	The solicitor acting for Paragon will register the charge in accordance with Paragon's instructions to solicitors
Data quality check (check that system and paper file match):	100%, via Image system
Credit Risk Management	
Credit risk team employees and experience:	Credit risk team operates with two senior, experienced staff and 4 analysts. Head of Department has 12 years with Paragon(23 years in credit risk industry). Senior manager 3 years with Paragon (21 years credit risk experience)
Reporting line of Chief Risk Officer :	Chief Executive Officer
Ability to track loan performance by specific loan characteristics?:	Yes, performance can be tracked by any characteristic recorded on Paragon system. E.g. originator, valuer, solicitor, loan size, score etc.

Source: Paragon Banking Group

Exhibit 18

Originator Stability:	At closing
Quality Controls and Audits	
Responsibility of quality assurance:	Independent team (part of team of six) under the control of a team leader (separate to the underwriting area)
Number of files per month being monitored:	100% audit post offer and post completion with findings passed back to underwriting team leader on a monthly basis.
Recording of quality assurance findings and analysis of causes:	Yes and Yes
Frequency of operational audits for the underwriting processes:	Annually
Management Strength and Staff Quality	
Average turnover of underwriters:	Average turnover of underwriters for the last 2 years 1st Apr 16 to 31st Mar 17: 2 leavers and 9 new starters 1st Apr 17 to 31st Mar 18: 1 leaver and 12 new starters
Training of new hires and existing staff:	Buddy principle - mixing training with 4 eye review (finally hierarchical mandate approval process). Then ongoing review for quality.
Technology	
Main software used:	ARIES is the core component of the Paragon First Mortgage systems that support all phases of flexible, repayment, endowment, rest or interest only mortgage operations, from initial application processing through servicing, accounting and collections. There are interfaces to the general ledger accounting System 21 and to various administrative systems used by finance and treasury operations. The software schedule is operated through ROBOT. A monthly process known as the collection run calculates the monthly interest owed by the customer, generates insurance premiums and creates an extract file of customer payments to be submitted to BACS. Overnight, weekly and monthly process produces reports and statistical information on redemptions, mortgage arrears and insurance premiums.
Tools/infrastructure available:	See below.
Back-up server synchronisation and distance from main server:	Paragon uses two IBM I Power 7 (previously known as iSeries and earlier as AS/400) computers to operate all its product application, account administration and general ledger systems. POWER 7 (P7) processor technology is designed to deliver performance, scalability, reliability, and manageability that is required for the high I/O and memory applications used by the Group. The Power 720 server is a high-performance, energy efficient, reliable, and secure infrastructure and application server with innovative workload-optimizing and energy management technologies.
Frequency of disaster recovery plan test:	Tests are carried out on a monthly basis with a full test of the BCP taking place annually. A full exercise schedule is signed off annually by the BC Working Group.
Securitisation related	
%age of book securitised	As at September 2018, the securitised assets, as a percentage of the buy to let assets, was approximately 48.99%.
Previous experience with buy backs from securitisations	There have been no recent repurchases. Historically, there has been one repurchase where the solicitor failed to register Paragon's charge.

Appendix 2: Summary of the servicer's collection procedures

Exhibit 19

Servicer Ability	At closing
Loan Administration	
Entities involved in loan administration:	None
Abandonment rate (% call not answered within 20 seconds):	Less than 1% Collections
Early Arrears Management	
Entities involved in early stage arrears:	Internal Collections team
Hours & days of operation:	Mon to Fri 8am to 8pm. Sat 8am to 5pm
Ratio of loans per collector (FTE)1:	Around
Definition of arrears & default	UK Standard - 3 periods
Pre-arrears strategy: Do you contact the borrower to remind that the payment prior to account is due?	Yes
Pre-arrears strategy: If yes, how do you select the account to be called,	Behavioural analysis and proactive arrangement contact
Arrears strategy for 1-29 days delinquent (please select and if needed customise the relevant option)	From day 1 - letter sent & collection calls, supported with Field Calls and daily attempts at contact
Arrears strategy for 30 to 59 days delinquent (please select and if needed customise the relevant option)	From day 30 - as above
Arrears strategy for 60 to 89 days delinquent (please select and if needed customise the relevant option)	At Day 60 - normally final pre-Receiver-of-Rent Field Call and then instruction of Receiver-of-Rent
	From day 60-90 Receiver-of-Rent normally appointed
	Simultaneous collections contact continues
Arrears strategy for 90 days or more delinquent to late stage (please select and if needed customise the relevant option)	Receiver-of-Rent normally appointed
Prioritisation rules for delinquent accounts:	Level of arrears, type of portfolio, payment type missed
Use of historical payment behaviour in the collection strategy:	Aged history used showing arrears now, previous month and previous year
Data enhancement if borrower is not contactable:	Field calls, directory enquiries, bank letters and trace companies
Reason for non-payment:	Arrears reason code data collected
Loss Mitigation and Asset Management Practices:	
Transfer of a loan to the late stage arrears team:	Normally Receiver-of-Rent from Day 60 and Pre-Salvage where forecast loss subsequently identified at Day 60
Entities involved in late stage arrears:	Collections, Portfolio Relationship, Receiver, Field Team
Entities involved in loss mitigation	Portfolio Relationship, Pre-Salvage, Receiver, Litigation, Negligence review, external solicitors, Telephone Collections
Hours & days of operation:	Telephone Collections as per Early Arrears Management. Other units normally Mon to Fri, 8.30am to 5.00pm
Ratio of loans per collector (FTE):	Included in previous figure for collections
Analysis performed to assess/propose loss mitigation solutions:	Review including LTV, interest due vs. interest paid, pre-salvage review, information from PRM visits and negligence review
Types of loss mitigation solutions including percentage defined as the number of accounts which were 30+ delinquent for which one solution has been applied divided by the total number of accounts which were 30+ delinquent over the past 12 months.	N/A
Role of field agents:	Supporting Receiver-of-Rent in tenant contact and property management
Borrowers re-defaulting 90 days or more after loss mitigation:	N/A
Contact with borrower during the legal process:	N/A
Time from first default to litigation and from litigation to sale:	N/A
Average recovery rate on closed files, recovery time and change in price of properties sold:	N/A

Appendix 3: Originator and servicer reviews

Exhibit 21

Summary of originator and servicer assessment

Originator Assessment	Main Strengths (+) and Challenges(-)
Overall Assessment:	Average
Originator Ability	
Sales & Marketing Practices	+ Separate sales and underwriting function + One-to-one meetings with professional landlords - Origination channels: 90% brokers vs. 10% packagers
Underwriting Policies & Procedures	+ Depending on the complexity of the file underwriters underwrite 2 - 4 applications per day + No exceptions allowed. + No CCJ and no self-certification - Income data is collected yet is not relied upon in the affordability calculation
Property Valuation Policies & Procedures	+/- Full internal valuation performed by internal qualified surveyors with 10 years of qualified experience. Expertise on rentability of property is needed.
Closing Policies & Procedures	+ All checks are performed through notary with all documents being imaged
Credit Risk Management	- Specific product though moving more to more risky non-professional landlords + Independent risk management team with separate reporting lines. + Average credit risk experience of management is 20 years +/- No changes to underwriting criteria since previous issuance
Originator Stability	
Quality Control & Audit	+ Independent team with 6 people in their team. Small centralised team that can do the checks on underwriters locally.
Management Strength & Staff Quality	+ Average experience of underwriter's manager is 17 years + Large part of underwriting have more than ten years' experience + Training involves "buddy" principle with four eyes review
Technology	
	+/- Internally built system + Timely information received upon request + Documents are scanned and are available in the head office.
Servicer Assessment:	
Main Strengths (+) and Challenges(-)	
Overall Assessment:	Average
Servicer Ability	
Loan Administration	+ All loan administration functions performed centrally + 100% of collections through direct debit
Early Arrears Management	+ Early warning signs used such as cancelled direct debits and through monthly external credit checks for all loans. + Proactive and early contacting of the borrowers.
Loss Mitigation and Asset Management	+ Few repossessions and low losses + Ability to implement portfolio based recovery measures - Active receiver of rent strategy to mitigate losses
Servicer Stability	
Management Strength & Staff Quality	+ Very experienced staff + Low turnover
IT & Reporting	+ Frequent back up testing.
Quality control & Audit	
	+ Overall robust quality control framework + Daily audits to examine the adequacy between issues encountered by borrowers and action taken by collectors
Strength of Back-up Servicer Arrangement:	+ Warm

CREDIT RATINGS ISSUED BY MOODY'S INVESTORS SERVICE, INC. AND ITS RATINGS AFFILIATES ("MIS") ARE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MOODY'S PUBLICATIONS MAY INCLUDE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT OR IMPAIRMENT. SEE MOODY'S RATING SYMBOLS AND DEFINITIONS PUBLICATION FOR INFORMATION ON THE TYPES OF CONTRACTUAL FINANCIAL OBLIGATIONS ADDRESSED BY MOODY'S RATINGS. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS AND MOODY'S OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. CREDIT RATINGS AND MOODY'S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER. ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY ANY PERSON AS A BENCHMARK AS THAT TERM IS DEFINED FOR REGULATORY PURPOSES AND MUST NOT BE USED IN ANY WAY THAT COULD RESULT IN THEM BEING CONSIDERED A BENCHMARK.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for ratings opinions and services rendered by it fees ranging from \$1,000 to approximately \$2,700,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657 AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY250,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.
